

## Electrical measurement technology. Re-invented.

Simpler and safer: the new era of measuring instruments from Testo.

#### High-tech from the Black Forest.

For more than 55 years, Testo has stood for innovative measuring solutions made in Germany. As an expert in measurement technology and world market leader in portable measurement technology, we convince over 650,000 customers worldwide with highly precise measuring instruments for many different sectors. Whether in refrigeration, air conditioning and environmental technology, industrial applications, for exhaust and flue gas analysis, in the pharmaceutical and health sectors, for the monitoring of indoor air and food quality, or in the electrical field – we measure it. Our products help to save time and resources, to protect the environment and the health of humans, and to increase the value of goods and services.

#### With roots in the Black Forest.

At home all over the world. Our headquarters are in Lenzkirch in the Black Forest. However, Testo has for many years been a constantly growing global concern, now represented on all continents by 30 subsidiary companies and over 80 distribution partners. Roughly 2,500 Testorians worldwide research, develop, produce and market for the company with passion and expertise.

#### Our innovations are the engine which drives you forward.

The requirements for practical measurement solutions are becoming increasingly more complex and specific. That is why we have set ourselves the key task of identifying these customer requirements in industry and trade and translating them permanently into new technology. We carry out our own intensive research, which has given us a leading role in the market for decades. On the following pages, we present to you the result of extensive research in electrical measurement technology: revolutionary measuring instruments which make your daily job safer and more efficient than ever before.

#### Electrical measurement technology. Re-invented.

The innovative electrical measuring instruments from Testo stand out due to their extraordinary high level of userfriendliness, setting new standards with intelligent and completely new technology. Digital multimeters with automatic measurement parameter recognition, clamp meters with a unique grab mechanism, or voltage testers which also measure current – welcome to a new era.

Testing voltage on a heat pump with testo 755.

Measuring voltage on an outside refrigeration unit with testo 760.

Measuring current on an outside refrigeration unit with testo 755.

Error detection in a heating system with testo 750.

Measuring voltage on an air conditioning unit with testo 770.

Checking voltage on a distributor box with testo 745.

### Recognizes measurement parameters automatically.

#### The digital multimeter testo 760.

The three models of the testo 760 eliminate incorrect settings, because the measurement parameters are detected automatically via the assignment of the measuring sockets and also shown by the illumination of the appropriate function keys. Function keys replace the traditional dial, which means easier operation and greater reliability.

Measurement parameter recognition by socket allocation

Easy, modern operation with function keys instead of a dial

Standards	EN 61326-1		

#### Grab cables without touching.

#### The clamp meter testo 770.

The three instruments in the testo 770 clamp meter family are ideally suited for current measurement in switching cabinets. One of the two pincer arms can be fully retracted into the instrument. This unique grab mechanism means that cables in tight switching cabinets can be easily grabbed. The automatic measurement parameter detection also ensures reliable work: in the current and voltage area, all three instruments detect direct and alternating current and select other parameters such as resistance, continuity, diode and capacitance automatically.

#### Comfortably legible from any position.

#### The voltage tester testo 750.

The three models in the testo 750 voltage tester family are the first instruments with an all-round LED display. The display can be seen from any position and guarantees an ideal voltage indication thanks to its unique fibre optics. All three models meet the latest voltage tester standard EN 61243-3:2010 and have a safety specification according to CAT IV. They have the most important functions for voltage testing, continuity testing and rotating magnetic field measurement.

#### The first voltage tester measuring current.

#### The current/voltage tester testo 755.

They are the first of their kind: voltage testers which meet the latest standard and which can also measure current. This means the two instruments are suitable for virtually all daily electrical measuring tasks. Each time they are used they automatically select the right settings and therefore prevent dangerous incorrect settings. Both models have all the important functions for determining voltage/deenergization, for measuring current and resistance, as well as for continuity tests. Their measuring tips can be changed easily, so that the whole instrument does not need to be replaced in the event of damage.

#### Filters high-frequency interference.

#### The non-contact voltage tester testo 745.

The non-contact voltage tester with a measuring range of up to 1,000 V is particularly well-suited to fast initial checking of any suspected fault sources. When the presence of alternating voltage is determined, the testo 745 gives a warning via a clear visual and acoustic signal. In order to increase the reliability, the voltage tester has a filter for highfrequency interference.

First test of voltage supply on a compressor.
